

DYNAMIC SOLUTIONS TAILORED TO MEET YOUR NEEDS.

INNOVATION—CREATING SOLUTIONS OTHERS CAN'T

Bringing more than 30 years of innovative, advanced technology design and production in a HIGHLY regulated environment, we can add value in a variety of ways at all stages of the development cycle. Risk management, program efficiency, and ROI are supported through full regulatory compliance from process to documentation.

AS9100

ISO 9001

ISO 13485

ISO 7/8
CLEANROOMS

MASTERY

- Hardened Electronics
- Precision Controls
- Infrared Imaging
- Special Test
- Emission Security
- Multiple OTAs

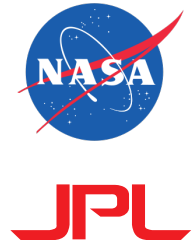

DIFFERENTIATORS

- Rapid prototyping (Distillery)
- Coordinated IR&D Investments
- Durable, Global Supply Chain
- Life Cycle Product Management

MISSION ASSURANCE

Mission Assurance is a full life-cycle engineering process to identify and mitigate design, production, test, and field support deficiencies threatening mission success. It reaches across the enterprise, supply base, business partners, and customer base to enable customer success.

The same mission assurance approach that lets us travel with NASA to search for life on Jupiter leads us now to develop highly robust technologies for Lifesciences, Pharmaceuticals, and Medicine.
